Try for \$5/month

With the activation of KIP-162 as part of Kaia hardfork, transaction senders are likely to pay higher gas fees than before. KIP-162 is similar to EIP-1559, where a gas price is the base fee plus a priority fee (tip).

If your dApp or wallet utilizes type-2 transactions (EIP-1559), ensure you set a reasonable priority fee. You can also call the `eth_maxPriorityFeePerGas` API to retrieve the recommended tip.

If your dApp or wallet utilizes other types like legacy (type-0) or fee-delegated transaction types, be careful when setting the `gasPrice` because you'll pay the full `gasPrice` for the transaction. For instance, if you declare `gasPrice` as 500 gwei, under the lowest base fee, the transaction will pay 25 gwei for the base fee and 475 gwei for the priority fee. To pay an appropriate gas price, it is recommended to call the `eth_gasPrice` API to retrieve the recommended `gasPrice`.

about debug traces in the [docs](insert link here).

To node operators

For backward compatibility, the RPC namespaces “kaia” and “klay” are both supported and functionally identical. Similarly, the network selection flags “— cypress” and “— mainnet” are interchangeable, as are the flags “— baobab” and “— kairos.” However, the “— testnet” flag is removed as the testnet is now called Kairos.

The binary packages in .tar.gz and .rpm formats, as well as the docker images, are distributed starting from this version. Please find the most suitable format for your installation.

Improvements

- Updated message signing RPCs to be EIP-191 compliant and move away from KIP-97 (#33)

- Rename the Testnet to Kairos (#34)
- Minor maintenance (#10, #20, #21, #19, #25, #22, #30, #32, #37, #38, #49)

Downloads

- Linux Cypress: (tgz) [kcn kpn ken](#) (rpm) [kcn kpn ken](#)
- Linux Baobab: (tgz) [kcn kpn ken](#) (rpm) [kcn kpn ken](#)
- Linux Common: (tgz) [kscn kspn ksen kbn kgen homi](#) (rpm) [kscn kspn ksen kbn kgen homi](#)
- Docker: [kaiachain/kaia:v1.0.1](#)

Thank you [@junha-ahn](#) for your first contribution to Kaia.
